Annual Update
For
Windsor 1982 Act
Benefit Assessment District

FY 2021-22

Town of Windsor
County of Sonoma
State of California

June 2021

Prepared By:
Coastland Civil Engineering, Inc.

FY 2021-22

WINDSOR 1982 ACT BENEFIT ASSESSMENT DISTRICT
(Pursuant to the Government Code Sections 54703-54719)

The undersigned respectfully submits the enclosed Annual Update as requested by the Town, dated _____, 2021.

COASTLAND CIVIL ENGINEERING INC.

By: _____
John L. Wanger, RCE 43148, Exp. 3/31/22

FY 2021-22 ANNUAL REPORT FOR
WINDSOR 1982 ACT BENEFIT ASSESSMENT DISTRICT

Coastland Civil Engineering, Engineer of Work for the Windsor 1982 Act Benefit Assessment District, Town of Windsor, Sonoma County, California, that was created in August, 2008, makes this Annual Update (Update) as directed by the Town for Fiscal Year (FY) 2021-22.

Background

In August, 2008, by Resolution No. 2338-08, the Town of Windsor formed the Windsor 1982 Act Benefit Assessment District to recover costs associated with the operation and maintenance of flood control, drainage and street improvements within the public rights-of-way and public parcels of developments that receive special benefit from specific facilities within the Town. This district is pursuant to the Benefit Assessment Act of 1982 (as defined by Sections 54703–54719 of the Government Code). Section 54710 of the Government Code outlining the rules and regulations of Benefit Assessment Act of 1982 (1982 Act) states:

> "(a) Any local agency which is authorized by law to provide one or more of the following services may impose a benefit assessment pursuant to this chapter to finance the maintenance and operation costs of these services:
> (1) Drainage
> (2) Flood control
> (3) Street lighting
>
> (b) Any local agency which is authorized by law to maintain streets, roads, or highways may impose a benefit assessment pursuant to this chapter to pay for the maintenance of those streets, roads, or highways."

Although the 1982 Act allows for the maintenance of street lighting (Section 54710(a)(3)), the Town of Windsor funds the operation and maintenance of street lights through its Landscaping and Lighting Assessment Districts and has not used this assessment district to fund those expenses.

The Town of Windsor formed the initial 1982 Act District in 2008 with the Shiloh Oaks development, which was designated as Zone 101. As additional developments occur within the Town having storm drain, flood control or street improvements that provide special benefit, these developments may be annexed into this district. It is the intent of this district to annex new developments into this district each as separate zones. Since formation, various new developments have been annexed. It should be noted that Zone numbers may not be consecutive as they are set to match zone numbers used in the Town of Windsor Landscaping and Lighting Assessment District No. 2 (LLAD-2). Not every zone in LLAD-2 has improvements covered by this Assessment District.

In its initial year of formation, and when any new assessment is proposed to be levied, Section 54716 (a) of the Government Code requires the Town to have a written report prepared and filed with the Town Clerk that includes a description of the service proposed

to be financed through the revenue derived from the assessment; a description of each lot or parcel proposed to be in the district; the amount of the proposed assessment for each parcel; and the basis or methodology of the assessment. Section 54715(a) of the Government Code precludes assessments from being levied on federal, state or Town-owned properties. Per Section 54711(a)(3) of the Government Code, the revenue derived from any assessments associated with this district shall not be used to pay the cost of any service other than the service for which the assessment was levied.

Fiscal Year 2021-22

For FY 2021-22, there are no new zones, annexation of new parcels into existing zones, or increase of assessments greater than their allowed maximums. As such, this district does not require three Council meeting actions or an Engineer's Report.

The purpose of this annual update is to outline estimated expenditures based on new cost estimates to operate and maintain the Assessment District improvements for FY 2021-22 and to update the annual assessments appropriately. No public hearings or official report are mandated by the Government Code. The Town, however, requested this Update to ensure assessments levied are commensurate with expenditures incurred.

A minimum annual reserve policy for this assessment district was established during FY 2015-16 to set aside some monies to pay for unanticipated expenses in any given year (such as vandalism, additional pod unit cleaning, etc.) as well as to account for the lag in the beginning of the budget year (July 1st) and the initial receipt of assessments (December). An adequate annual reserve was determined to be between 50% and 60% of a zone's annual expenses.

Most zones in this assessment district also have an accumulating reserve fund that is built up to cover the cost of a non-annual event, such as silt removal in the creek or Tree/Shrub/Media replacement in a tree-pod unit. These funds accumulate to the estimated cost of the non-annual event. The estimated cost of replacing tree/shrub/media (at this time) is $2,000 per tree pod unit. The estimated cost for silt removal in the creek (at this time) is $112,000. Once this fund balance is reached for a particular zone, the replacement/removal assessment for that item is not incurred until the fund needs to be rebuilt. If excess annual reserves exist and the non-annual reserve fund has been satisfied, any reserves beyond the minimum established will be used to reduce the annual assessment. It should be noted that the estimated accumulating fund levels are subject to change as determined by the Town. Increases in these accumulating fund levels will not increase the annual assessment over the established maximum annual assessment amount.

Proposition 218 and Special Benefits

In 1996, California voters approved Proposition 218 which amended the California Constitution by adding Article XIII C and Article XIII D. Those Articles affect the ability of local government to levy and collect taxes, assessments, and property-related fees and charges. With respect to assessment districts, Article XIII D stipulates that a parcel's assessment not exceed the reasonable cost of the proportional special benefit conferred upon that parcel. "Special benefit" is defined as "a particular and distinct benefit over and

above general benefits conferred on real property located in the district or to the public at large.

The effects of Proposition 218 with respect to the Annual Engineer's Report are that the special benefits conferred upon assessed parcels through the improvements and services funded by the District must be identified, any general benefit conferred upon the public at large by those same improvements and services must also be identified, and the annual costs of said improvements and services must be apportioned between the two. The cost of services attributable to a general benefit may not be assessed.

In the case of Windsor 1982 Act Benefit Assessment District, "improvements and services" primarily refers to flood control, drainage and street improvements in identified areas and the operation and maintenance thereof. In general, the special benefits provided to each parcel within each area include:

- Enhanced desirability of properties through association with the improvements.
- Reduced flooding risk of properties through maintenance of the improvements.
- Improved air quality from additional vegetation.
- Improved water quality from reduced pollutants in storm water run-off

Each parcel within a zone receives a particular and distinct special benefit from the maintenance of the improvements within that zone even though improvements may not be adjacent to each parcel. Although members of the public may walk or drive through a zone and appreciate the aesthetic appeal of the tree pod vegetation or improved water quality, this does not necessarily confer a general benefit to the public at large and, in any case, is determined to be negligible relative to the special benefits conferred upon the parcels within a particular zone.

Part D of this Report, Method of Apportionment of Assessment, includes further discussion of the special and general benefits conferred by the specific improvements and services within each Zone.

Cost Index Information

In order to take inflation into account and to recognize noticing/voting requirements for increasing the assessments, this Assessment District includes an allowance for an annual increase to the estimated maximum annual assessments in accordance with the annual Consumer Price Index (CPI). The annual CPI is based on the All Urban Consumers (San Francisco Area) CPI from the U. S. Department of Labor, Bureau of Labor Statistics. All new zones to be annexed into this district are also to include an allowance for an annual increase to the maximum annual assessments in accordance with the same CPI.

The budgets, assessments and California Constitution, Article XIII D (sometimes referred to as Proposition 218) impacts are included in the following description of each zone.

Zone 101 – Shiloh Oaks Development

Zone 101 covers the costs associated with the operation and maintenance of storm drain and flood control facilities constructed within the Shiloh Oaks development. These activities include annual weed abatement within the drainage ditch and creek channel and silt removal, as needed. The boundaries of this zone are contiguous with the boundaries shown on Parcel Map 05-24 and as amended by Amended Map No. 05-24, recorded May 27, 2010. (See the assessment diagrams included at the end of this Report.)

It should be noted that the original Parcel Map associated with the Shiloh Oaks development (PM 05-24) indicated that further development of land and construction of additional public streets will occur within the boundaries of this zone. Based on estimates derived from the layout of the proposed streets as shown on the parcel map, a maximum annual assessment per acre was determined.

For FY 2021-22, the budget for this zone has decreased from FY 2020-21 to $2,050.84. The Silt Removal Carryover Reserve fund is fully satisfied. Silt removal not expected to be required this year. The ending fiscal year annual reserve is anticipated to be higher than the desired reserve policy limits due to the lower budget this year. Due to excess reserves, a portion will be used to keep the FY 2021-22 annual assessment the same as last year. The reserve level will be reviewed again next year and used to reduce the annual assessment if it is still higher than desired.

This report recommends an increase of the maximum annual assessment for Zone 101 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 101 to $66,278.01. As the annual assessment for FY 2021-22 is less than this amount, notices are not required to be sent nor is a vote required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as weed abatement and administrative costs, are incurred annually, silt removal will be required approximately every five years. Pursuant to Government Code Section 54719, money for silt removal and any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this Report under the headings “Maintenance & Operations” and “Professional Services”. It was anticipated that these funds would be expended up to once every five years, or as otherwise needed. The accumulated funds are estimated to be at their required level. Silt removal work is not anticipated to be required this year.

Zone 103 – Windsor Redwoods

In FY 2010-11, Zone 103 was created to cover the costs associated with the operation and maintenance of the storm drain and flood control facilities constructed with the Windsor Redwoods development. This development is expected to remain a single parcel with 65 affordable housing apartments. The improvements covered in this assessment district originally consisted of a grassy-swale and one storm water quality feature, a Filterra tree

pod unit. The development of the parcel to the north has removed the need for the grassy swale. The special benefit to this parcel now consists of the one tree pod unit. The boundaries of this zone are contiguous with the boundaries shown on the improvement plans associated with this development (see the assessment diagrams included at the end of this Report.)

The specific benefit of the storm drain facility constructed for this development will benefit the entire parcel. As such, the parcel will be considered one parcel unit. Any subdivision or merger of this parcel by future maps will be treated as described in Part D of this Report. Due to anticipated increased expenses in the future, a maximum annual assessment per parcel unit was determined which will be allowed to increase by the CPI as noted above, each year to account for inflation.

For FY 2021-22, the budget for this zone has increased from FY 2020-21 to $3,922.78. The Tree/Shrub/Media Replacement fund is fully satisfied. The ending fiscal year annual reserve is anticipated to be within the required reserve policy limits.

This report recommends an increase of the maximum annual assessment for Zone 103 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 103 to $5,529.15. As the annual assessment is less than this amount, notices are not required to be sent, nor is a vote required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as tree pod maintenance and administrative costs, are incurred annually, it is anticipated that the tree or shrub media within the tree pod unit will need to be replaced approximately every five years. Pursuant to Government Code Section 54719, money for any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this Report under the heading “Maintenance & Operations.” It is anticipated that these funds will be expended up to once every five years, or as otherwise needed.

Zone 104 – Manzanita Subdivision

In FY 2010-11, Zone 104 was created to cover the operation and maintenance costs of the storm drain and flood control facilities constructed with the Manzanita Subdivision. Specifically, these consist of four Filterra tree-pod storm water quality units. This zone consists of 22 parcel units. The boundaries of this zone are contiguous with the boundaries shown on the Final Map associated with this development (see the assessment diagrams included at the end of this Report.) The specific benefit of the storm water quality features associated with this development will benefit this development only and each parcel within this development equally. Full development of this subdivision occurred in FY 2012-13.

For FY 2021-22, the budget for this zone has increased from FY 2020-21 to $7,401.52. The Tree/Shrub/Media Replacement fund is fully satisfied. The ending fiscal year annual reserve is anticipated to be within the required reserve policy limits.

This report recommends an increase of the maximum annual assessment for Zone 104 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 104 to $10,882.81. As the annual assessment for FY 2021-22 is less than this amount, notices are not required to be sent nor is a vote required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as tree pod maintenance and administrative costs, are incurred annually, it is anticipated that the tree or shrub media within the tree pod units will need to be replaced approximately every five years. Pursuant to Government Code Section 54719, money for any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this Report under the heading "Maintenance & Operations". It is anticipated that these funds will be expended up to once every five years, or as otherwise needed.

Zone 108 – Bell Village Commercial

In 2015-16, Zone 108 was created to cover the costs associated with the operation and maintenance of the storm drain and flood control facilities being constructed with the commercial portion of the Bell Village Commercial Center, Town File No. MJS 09-17 plans. Specifically, this zone will benefit from four Filterra tree-pod storm water quality units and three CUDO storm water detention and infiltration units. The specific benefit of the storm water quality features being constructed will benefit these parcels only and each parcel individually based on the parcel's acreage. The boundaries of this zone are contiguous with the boundaries shown on the plans associated with the commercial portion of this development. (See the assessment diagrams included at the end of this Report.)

The map for this development was recorded in May of 2016. The four various-sized parcels are assessed on their individual acreage. For FY 2021-22 the budget for this zone increased to $7,841.18. The ending fiscal year annual reserve is anticipated to be at zero. It is expected that the reserves will increase over the next few years.

This report recommends an increase of the maximum annual assessment for Zone 108 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 108 to $12,366.57. As the annual assessment for FY 2021-22 is less than this amount, notices are not required to be sent, nor is a vote required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as tree pod maintenance and administrative costs, are incurred annually, it is anticipated that the tree or shrub media within the tree pod units will need to be replaced approximately every five years. Pursuant to Government Code Section 54719, money for any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this Report under the heading

"Maintenance & Operations". It is anticipated that these funds will be expended up to once every five years, or as otherwise needed.

Zone 109 – Vintage Oaks on the Town Green

In 2015-16, Zone 109 was created to cover the costs associated with the operation and maintenance of the storm drain and flood control facilities being constructed with the residential portion of the Bell Village Commercial Center, Town File No. MJS 09-17 plans. Specifically, this zone benefits from seven Filterra tree-pod storm water quality units and three CUDO storm water detention and infiltration units. The specific benefit of the storm water quality features constructed will benefit the entire parcel. The boundaries of this zone are contiguous with the boundaries shown on the plans associated with the residential portion of this development. (See the assessment diagrams included at the end of this Report.) In 2016-17, the name for this zone was changed to Vintage Oaks on the Town Green to correspond with the improvement plans for this area.

The map for this development was recorded in May of 2016. This zone consists of one parcel. Up to 400 apartments may be built on this parcel. The budget for this zone has decreased from FY 2020-21 to $10,934.62. The ending fiscal year annual reserve is anticipated to be below the required reserve policy limits. It is expected this reserve level will increase over the next few years.

This report recommends an increase of the maximum annual assessment for Zone 109 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 109 to $19,864.45. As the annual assessment for FY 2021-22 is less than this amount, notices are not required to be sent nor is a vote required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as tree pod maintenance and administrative costs, are incurred annually, it is anticipated that the tree or shrub media within the tree pod units will need to be replaced approximately every five years. Pursuant to Government Code Section 54719, money for any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this Report under the heading "Maintenance & Operations". It is anticipated that these funds will be expended up to once every five years, or as otherwise needed.

Zone 110 – Holiday Inn

Zone 110 was created in FY 2015-16 to cover the costs associated with the operation and maintenance of the storm drain and flood control facilities constructed with the Holiday Innplans. Specifically, these consist of two Filterra tree-pod storm water quality units and creek maintenance. The specific benefit of the storm water quality features constructed, and the riparian maintenance will benefit this parcel only. The boundaries of this zone are contiguous with the boundaries shown on the plans associated this development (see the assessment diagrams included at the end of this Report). This parcel is not anticipated to

subdivide further in the future and will be considered one parcel unit. Further subdivision or merger of this parcel by future maps will be treated as described in Part D of this Report.

For FY 2021-22, the budget for this zone has decreased from FY 2020-21 to $5,596.92. The Tree/Shrub/Media Replacement fund is not yet satisfied. The annual reserve balance is anticipated to build over the next few years to the desired level.

This report recommends an increase of the maximum annual assessment for Zone 110 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 110 to $9,843.12. As the annual assessment for FY 2021-22 is less than this amount, notices are not required to be sent nor is a vote required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as tree pod maintenance and administrative costs, are incurred annually, it is anticipated that the tree or shrub media within the tree pod units will need to be replaced approximately every five years. Pursuant to Government Code Section 54719, money for any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this Report under the heading "Maintenance & Operations". It is anticipated that these funds will be expended up to once every five years, or as otherwise needed.

Zone 111 – Russian River Brewing Company

Zone 111 was created in FY 2015-16 to cover the costs associated with the operation and maintenance of the storm drain and flood control facilities being constructed with the Evans/Drew Industrial Phase 2 plans. In FY 2017-18, the name of this zone was changed to Russian River Brewing Company. The new property owner took responsibility for maintaining the drainage facilities on the parcel, storm drain facilities were not required with the revised plan and Town maintenance was no longer required for this zone. In FY 2019-20, this parcel was detached from Zone 111 and the Zone was dissolved from the District by Town Council on May 1, 2019 by Resolution No. 3521-19. Funds that were collected but not required were transferred to the Town General Fund (per Section 22610 of the Streets and Highways Codes) and returned.

Zone 113 – Victoria Oaks

Zone 113 was created in FY 2016-17 to cover the costs associated with the operation and maintenance of storm drain features constructed with the Victoria Oaks subdivision (Town File No. MJS 05-28 plans). These improvements consist of bioswales throughout the subdivision. The boundaries of this zone are contiguous with the boundaries shown on the plans associated with this development. (See the assessment diagrams included at the end of this Report.) The storm water quality features being constructed will benefit these parcels only and each parcel equally.

For FY 2021-22, the budget for this zone has increased from FY 2020-21 to $14,207.96.

No tree/media replacement fund balance is required or accumulated for this zone. The annual reserve balance is anticipated to build over the next few years to the desired level.

This report recommends an increase of the maximum annual assessment for Zone 113 by the 2020 CPI increase of +2.00%. This sets the FY 2021-22 maximum total annual assessment for Zone 113 to $15,938.02. As the annual total assessment for FY 2021-22 is less than the maximum annual total assessment allowed for the zone, notices are not required to be sent nor is a vote required from the impacted property owners.

Zone 115 – Los Amigos Subdivision

Zone 115 was created in FY 2017-18 and consists of one parcel being subdivided into 6 individual parcels and a remainder parcel. The remainder parcel is not a part of this zone. This zone will specifically benefit from the operation and maintenance of the storm drain features constructed for the Los Amigos Subdivision, Town File No. MJS 14-20 plans. Specifically, these consist of two Filterra tree-pod storm water quality units. The boundaries of this zone are contiguous with the boundaries shown on the plans associated with this development. (See the assessment diagrams included at the end of this Report.)

Due to there being only one parcel at this time, the parcel is assessed as a single parcel unit for this zone. In the future with full build-out of this development into 6 parcels of various sizes, the benefit to each parcel will be determined on the basis of proportionate storm water runoff from each parcel. At this time, it appears that only four of the six proposed parcels will benefit. Lots 1, 2, 3 and 4 as shown on the Los Amigos Subdivision Tentative Map all appear to have drainage that benefits from the tree-pod units. Lot 5 and Lot 6 drainage goes to an existing inlet on Los Amigos Road and does not benefit from the tree-pod units.

The budget for this zone has decreased from FY 2020-21 to $0 as development has stalled and no maintenance is anticipated to be required for this fiscal year. Funding for the Tree/Shrub/Media Replacement fund will be delayed until development has commenced.

This report recommends an increase of the maximum annual assessment for Zone 115 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 115 to $8,369.68. The annual assessment for FY 2021-22 is less than this amount and therefore notices are not required to be sent nor is a vote required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as tree pod maintenance and administrative costs, are incurred annually, it is anticipated that the tree or shrub media within the tree pod units will need to be replaced approximately every five years. Pursuant to Government Code Section 54719, money for any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this report under the heading

"Maintenance & Operations". It is anticipated that these funds will be expended up to once every five years, or as otherwise needed.

Zone 116 – Windsor Veterans Village

Zone 116 was created in FY 2020-21 and consists of one parcel with 60 apartments. This zone specifically benefits from the operation and maintenance of the drainage features within the Windsor Veterans Village, Town File No. UP/DRR 17-18, plans. Specifically, these consist of bioretention features. While there are two parcels involved in the development of this zone, the benefit to the easterly parcel is negligible at this time. As future development is anticipated on this easterly parcel, potential annexation and benefits will be determined at that time. The boundaries of this zone are confined to the westerly parcel within this development. (See the assessment diagrams included at the end of this report.) This parcel is not anticipated to subdivide further in the future and will be considered one parcel unit. Further subdivision or merger of this parcel by future maps will be treated as described in Part D of this report.

For FY 2021-22, the budget for this zone has increased from FY 2020-21 to $5,375.82. No tree/media replacement fund balance is required or accumulated for this zone. The annual reserve balance is anticipated to build over the next few years to the desired level.

This report recommends an increase of the maximum annual assessment for Zone 116 by the 2020 CPI increase of +2.00%. This sets the FY 2021-22 maximum total annual assessment for Zone 116 to $8,091.66. As the annual total assessment for FY 2021-22 is less than the maximum annual total assessment allowed for the zone, notices are not required to be sent nor is a vote required from the impacted property owners.

Zone 117 – 330 Arata Lane Subdivision

Zone 117 was created in FY 2020-21 and consists of one parcel being subdivided into four individual parcels and a remainder parcel. The remainder parcel is not a part of this zone. This zone will specifically benefit from the operation and maintenance of the storm drain features being constructed with the 330 Arata Lane Subdivision plans. Specifically, these consist of two tree-pod, Filterra type storm water quality units. The boundaries of this zone are contiguous with the boundaries shown on the Town File No. MJS/UP 15-30 plans associated with this development. (See the assessment diagrams included at the end of this report.) These parcels are not anticipated to subdivide further in the future, are of approximately equal size and will be considered four parcel units at buildout. Further subdivision or merger of this parcel by future maps will be treated as described in Part D of this report.

Due to there being only one parcel at this time, the parcel is assessed as a single parcel unit for FY 2021-22. The specific benefit of the storm water quality features associated with this development will benefit this development only and at buildout, each parcel within this development equally.

The budget for this zone has decreased from FY 2020-21 to $0 as development has stalled and no maintenance is anticipated to be required for this fiscal year. Funding for the Tree/Shrub/Media Replacement fund will be delayed until development has commenced.

This report recommends an increase of the maximum annual assessment for Zone 117 by the 2020 CPI increase of +2.00%. This sets the new FY 2021-22 maximum total annual assessment for Zone 117 to $6,171.00. The annual assessment for FY 2021-22 is less than this amount and therefore notices are not required to be sent nor is a vote required from the impacted property owners.

As the assessment will be a new assessment for Zone 117, notices will be sent and a vote will be required from the impacted property owners.

Accumulation of Funds

While specific budget items, such as tree pod maintenance and administrative costs, are incurred annually, it is anticipated that the tree or shrub media within the tree pod units will need to be replaced approximately every five years. Pursuant to Government Code Section 54719, money for any other non-annual line items will be collected through annual installments that the Town will place in a fund specific for this work. Monies collected for any non-annual maintenance item(s) are shown in Part B of this Report under the heading “Maintenance & Operations”. It is anticipated that these funds will be expended up to once every five years, or as otherwise needed.

Annual Update Format

This FY 2021-22 Annual Update consists of six parts as follows:

PART A - **Plans and Specifications**- This portion of the Engineer's Report describes any plans and specifications that may be needed for the installation of the improvements. If plans and specifications exist, they are filed with the City Clerk. Although separately bound, the plans and specifications are part of this Engineer's Report and are included in it by reference.

PART B - **FY 2021-22 Budget Cost Estimate –** Budget cost estimates associated with the operations and maintenance of the described improvements for each zone. In addition to an overall budget summary, a detailed FY 2021-22 Budget sheet and a FY 2021-22 Summary of Fund Balance sheet is provided.

PART C - **FY 2021-22 Assessment Roll –** A listing of the annual assessment on each benefited parcel of land within the Assessment District. The assessment amount is the estimated cost each parcel will contribute during FY 2021-22 towards the operation and maintenance of improvements within the Assessment District.

PART D - **Method of Apportionment of Assessment** - A statement of the method used by Engineer of Work to determine the amount proposed to be assessed against each parcel within each zone of the Assessment District.

PART E - **FY 2021-22 Property Owners List** - Names and addresses of the owners of real property listed as within this Assessment District, as shown on the last equalized assessment roll for taxes. The Assessor Parcel Number (A.P.N.) keys the list into the Assessment Roll of Part C.

PART F - **FY 2021-22 Assessment Diagrams** – The Assessment Diagram (map) showing all of the parcels of real property within each zone of the Assessment District. The assessment number keys the diagram Part C – Assessment Roll.

PART A

PLANS AND SPECIFICATIONS

The Assessment District will operate and maintain storm drain and flood control facilities located in the public rights-of-way or dedicated parcels for maintenance purposes within those zones of benefit as mentioned in this Report. Maintenance may include weed abatement, channel clearing (including the removal of silt, debris or other material as may be necessary to provide flood capacity within the channel), obtaining necessary permits, design and construction of needed improvements to keep the carrying capacity of the flood control channel at its original design level, cleaning of other storm drain facilities within the development, replacement of tree/shrub media and other maintenance or permitting that may be required to operate and maintain the storm drain and flood control facilities within Zones 101, 103, 104, 108, 109, 110, 113, 115, 116 and 117.

PART B
FY 2021-22 Budget Cost Estimate

The attached sheets include the detailed budgets for FY 2021-22 for all those costs associated with the operation and maintenance of each zone within the Assessment District. Also included is the Summary of Fund Balance sheet for FY 2021-22 for each zone. The total budget summary for FY 2021-22 for Windsor 1982 Act Benefit Assessment District is as follows:

Budget Summary			
Zone	**Revenue**	**Reserves Used**	**Budget**
Zone 101 - Shiloh Oaks	$1,050.84	$1,000.00	$2,050.84
Zone 103 - Windsor Redwoods	$3,722.78	$200.00	$3,922.78
Zone 104 - Manzanita	$6,801.52	$600.00	$7,401.52
Zone 108 - Bell Village Commercial	$7,841.18	$0.00	$7,841.18

PART D

METHOD OF APPORTIONMENT OF ASSESSMENT

Special and General Benefits

Each parcel within each of the zones of the Assessment District receives a distinct special benefit from drainage and flood control improvements and maintenance thereof as discussed below. Additionally, general benefits conferred to the community at large from improvements and maintenance thereof within each zone, if any, are identified.

The following is a brief description of the special benefits and manner that the annual assessment has been apportioned (spread) to each parcel in each Zone in the Assessment District:

Zone 101 – Shiloh Oaks Development

For Zone 101, flood control operations and maintenance activities include silt removal and weed abatement within a drainage ditch and the portion of Airport Creek within the zone (the publicly dedicated and maintained channel associated with this development). Each parcel within Zone 101 receives the following direct special benefits from the maintenance of the flood control facilities:

- Enhanced desirability of properties through association with the improvements.
- Reduced flooding risk of properties through maintenance of the improvements.
- Improved water quality from purification of storm run-off.

Although the community at large benefits from the improved aesthetics of a maintained creek channel, the general benefit is negligible compared to the flood control and air and water quality benefits received by properties within the zone.

The special benefit that each parcel receives from the operations and maintenance of these flood control facilities is dependent upon the area of the parcel that drain to Airport Creek. The size of the property draining to the creek determines the amount of storm water runoff reaching the zone's flood control facilities. It follows that each parcel's annual assessment cost is determined by the storm water runoff flowing to these flood control facilities. For example, if a parcel is 10% of the zone's total land area draining to Airport Creek, they receive 10% of the special benefits of the flood control facilities, and they are assessed for 10% of the annual cost of operating and maintaining those facilities.

Accordingly, the method by which each parcel is assessed for costs associated with Zone 101 is by taking the maintenance, operation and administrative costs of the flood control facilities and dividing this by the total net acreage (excluding street rights-of-way) of land within the zone that drains to Airport Creek to obtain a cost per acre. This cost per acre is then multiplied by the number of acres associated with a particular parcel that drains to Airport Creek to determine that parcel's overall assessment.

It should be noted that the drainage area and drainage boundaries for properties within the Shiloh Oaks development that drain to Airport Creek were obtained by using the boundaries of Exhibit B-2 (Master Storm Drain) dated July 2006 as shown in the Town of Windsor's Ordinance 2006-207 for the Shiloh Oaks Master Plan. Parcel boundaries were per Parcel Map No. 05-24 recorded Nov. 30, 2007 making the calculated total net drainage area 28.13 acres. Parcel boundaries were revised per Amended Parcel Map No. 05-24, recorded May 27, 2010 making the revised calculated total net drainage area 28.03 acres. This change affected the drainage area for parcel APN 059-271-104 only.

Zone 103 – Windsor Redwoods

At this time, the Windsor Redwoods facility to be operated and maintained using revenue produced from this assessment district zone includes one tree pod unit within the development. The original assessment also included a bioswale. The bioswale was removed when the adjacent parcel developed. Both facilities help to manage and purify storm run-off from this parcel.

This zone consists of a single parcel, and it receives the following direct special benefits from the maintenance of the remaining facility:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements,
- Improved air quality from additional vegetation (in tree pod unit), and
- Improved water quality from purification of storm run-off.

Although the public at large benefits from improved air and water quality, this general benefit is considered negligible compared to the improved aesthetics, reduced flooding, and air and water quality improvement resulting from the tree-pod treatment that will benefit the properties within Zone 103.

As this zone consists of one parcel and includes the maintenance of this facility, this parcel will be considered one parcel unit. Accordingly, the costs associated with Zone 103 will be taken as a whole and applied to the one parcel unit. This parcel is not anticipated to subdivide, although if it does so in the future, the total cost for the Zone 103 benefits would be spread equitably.

Zone 104 – Manzanita Subdivision

The Manzanita Subdivision facilities to be operated and maintained using revenue produced from this assessment district zone include four storm water quality features (tree pod units) within the development. This subdivision consists of 22 individual parcels. Each parcel within this zone receives the following direct special benefit from the maintenance of the storm water quality facilities:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements,
- Improved air quality from additional vegetation (in tree pod units), and
- Improved water quality from purification of storm run-off.

Although the public at large benefits from improved air and water quality, this general benefit is considered negligible compared to the improved aesthetics, reduced flood risk, and air and water quality improvement resulting from the tree-pod treatment that will benefit the properties within Zone 104.

As the run-off will be generated from each parcel and each parcel is generally equal in size, each parcel will be considered to share an equal portion of the special benefit of the maintenance of these facilities. Therefore, each parcel within this subdivision will be considered a one parcel unit, for a total of 22 parcel units for this zone. No parcel is anticipated to subdivide further nor are parcels anticipated to merge. If this does occur in the future however, the total parcel units and benefit costs attributable to the merged or subdivided parcels will be re-spread to those parcels only. For example, should a merge of two parcels occur, the new parcel would be assigned two parcel units. Should a split of one parcel occur, an equitable split of the one parcel unit would occur.

Zone 108 – Bell Village Commercial

The Bell Village Commercial facilities to be operated and maintained using revenue produced from this assessment district zone include four Filterra tree-pod storm water quality units and three CUDO storm water detention and infiltration units. These facilities help to manage and purify storm run-off from this subdivision which consists of four individual parcels and a common space. Each parcel within this zone receives the following direct special benefit from the maintenance of the storm water quality facilities:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements,
- Improved air quality from additional vegetation (in tree pod units), and
- Improved water quality from purification of storm run-off.

Although the public at large benefits from improved air and water quality, this general benefit is considered negligible compared to the improved aesthetics, reduced flood risk, and air and water quality improvement that will benefit the properties within Zone 108.

The special benefit that each parcel receives from the operations and maintenance of these drainage and water quality treatment facilities is dependent on the size of the parcel, as this determines the amount of runoff they contribute to the flood control facilities, and what portion of the total annual assessment costs they must pay. For example, if a parcel comprises 10% of the zone's land area, they contribute 10% of the total runoff that flows to the drainage facilities, they receive 10% of the special benefits of the flood control facilities, and they are assessed for 10% of the annual cost of operating and maintaining those facilities.

Accordingly, the method by which each parcel is assessed for costs associated with Zone 108 is by taking the maintenance, operation and administrative costs of the drainage and water quality treatment facilities and dividing this by the total net acreage (excluding street rights-of-way) of land within the zone to obtain a cost per acre. This cost per acre is then

multiplied by the number of acres associated with a particular parcel to determine that parcel's overall assessment.

Zone 109 – Vintage Oaks on the Town Green

The Vintage Oaks on the Town Green facilities to be operated and maintained using revenue produced from this assessment district zone include seven Filterra tree-pod storm water quality units and three CUDO storm water detention and infiltration units along Old Redwood Highway that benefit this development. These facilities help to manage and purify storm run-off from this subdivision which consists of one single parcel. The parcel within this zone receives the following direct special benefit from the maintenance of the storm water quality facilities:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements,
- Improved air quality from additional vegetation (in tree pod units), and
- Improved water quality from purification of storm run-off.

Although the public at large benefits from improved air and water quality, this general benefit is considered negligible compared to the improved aesthetics, reduced flood risk, and air and water quality improvement that benefit the properties within Zone 109.

As the special benefit is to this one parcel and includes the maintenance of these facilities, this parcel will be considered one parcel unit. Accordingly, the costs associated with this Zone will be taken as a whole and applied to the one parcel unit. This parcel is not anticipated to subdivide, although if it does so in the future, the total cost for the Zone 109 benefits would be spread equitably.

Zone 110 – Holiday Inn

The Holiday Inn facilities to be operated and maintained using revenue produced from this assessment district zone include two storm water quality features (tree pod units and creek parcel maintenance within the development. These facilities help to manage and purify storm run-off and flood control from this individual parcel. The parcel within this zone receives the following direct special benefits from the maintenance of the storm water quality facilities:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements,
- Improved air quality from additional vegetation (in tree pod units), and
- Improved water quality from purification of storm run-off.

Although the public at large benefits from improved air and water quality, this general benefit is considered negligible compared to the improved aesthetics, reduced flood risk, and air and water quality improvement that will benefit the properties within Zone 110.

As the special benefit is to this one parcel and includes the maintenance of these facilities, this parcel will be considered one parcel unit. Accordingly, the costs

associated with this zone will be taken as a whole and applied to the one parcel unit. This parcel is not anticipated to subdivide, although if it does so in the future, the total cost for the Zone 110 benefits would be spread equitably.

Zone 111 – **Russian River Brewing Company**

This zone is dissolved per Town Resolution 3521-19, May 1, 2019.

Zone 113 – **Victoria Oaks**

The Victoria Oaks facilities to be operated and maintained using revenue produced from this assessment district zone include bioswales located throughout the development. These facilities help to manage and purify storm run-off from this subdivision which consists 89 individual parcels. The parcels within this zone receive the following direct special benefits from the maintenance of the bioswales:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements, and
- Improved water quality from purification of storm run-off.

Each parcel within this zone receives a direct special benefit from the maintenance of the bioswales in that the maintenance ensures that these facilities operate in accordance with their original design and protect the parcels from flooding that would result from non-maintenance.

Although the community at large benefits from the improved aesthetics of a maintained drainage swale, the general benefit is negligible compared to the flood control and water quality benefits received by properties within the zone.

As the run-off will be generated from each parcel, and each parcel will be generally equal in size, each parcel will be considered to share an equal portion of the special benefit of the maintenance of these facilities. Therefore, each parcel within this subdivision will be considered one parcel unit, for a total of 89 parcel units for this zone when the map has recorded. No parcel is anticipated to subdivide further nor are parcels anticipated to merge. If this does occur in the future however, the total parcel units and benefit costs attributable to the merged or subdivided parcels will be re-spread to those parcels only. For example, should a merge of two parcels occur, the new parcel would be assigned two parcel units. Should a split of one parcel occur, an equitable split of the one parcel unit would occur.

Zone 115 – **Los Amigos Subdivision**

The Los Amigos Subdivision facilities to be operated and maintained using revenue produced from this assessment district zone include two storm water quality features (tree pod units) on Graciela Drive, within the development. These features help to manage and purify storm run-off from this zone which currently consists of a single parcel and is expected to subdivide into six individual parcels with a remainder parcel.

The four parcels that will abut Graciella Drive will receive the following direct special benefit from the maintenance of the storm water quality facilities:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements,
- Improved air quality from additional vegetation (in tree pod units), and
- Improved water quality from purification of storm run-off.

Although the public at large benefits from improved air and water quality, this general benefit is considered negligible compared to the improved aesthetics, reduced flood risk, and air and water quality improvement resulting from the tree-pod treatment that will benefit the properties within Zone 115.

Due to there being only one parcel at this time, the parcel is assessed as a single parcel unit for this zone.

In the future with full build-out of this development into 6 parcels of various sizes, the special benefit to each parcel will be determined on the basis of proportionate storm water runoff from each parcel. Two of the parcels, while within the boundaries of the subdivision, and within this zone, do not benefit from the storm water quality features as their drainage does not flow to Graciella Drive where the storm water quality features are located. As the four benefitting parcels will be of various sizes, the benefit to each will be based upon their parcel acreage. Accordingly, the method by which each parcel will be assessed (at buildout) for costs associated with Zone 115 is by taking the total estimated cost of the maintenance and operation of the storm drain facilities and the estimated administrative costs associated with this Zone then dividing this by the benefitting total net acreage (excluding street rights-of-way) within the zone to get a cost per acre. This cost per acre is then multiplied by the number of acres associated with a particular benefitting parcel to determine that parcel's overall assessment.

Zone 116 – Windsor Veterans Village

The Windsor Veterans Village facilities to be operated and maintained using revenue produced from this assessment district zone include bio-retention areas on a portion of existing Oak Park Road and along an extension of this road. These features help to manage and purify storm run-off from this zone which currently consists of a single parcel and is expected to hold 60 apartments.

The Windsor Veterans Village facilities to be operated and maintained using revenue produced from this assessment district zone include bio-retention areas located alongside Oak Park Road. These facilities help to manage and purify storm run-off from this subdivision which will consist of 60 apartments. This parcel will receive the following direct special benefits from the maintenance of the bioretention areas:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements, and
- Improved water quality from purification of storm run-off.

Although the community at large benefits from the improved aesthetics of a maintained drainage swale, the general benefit is negligible compared to the flood control and water quality benefits received by properties within the zone.

Due to there being only one parcel, the parcel is assessed as a single parcel unit for this zone. This parcel is not anticipated to subdivide further nor merge with adjacent parcels If this does occur in the future however, the total parcel units and benefit costs attributable to the merged or subdivided parcels will be re-spread to those parcels only.

Zone 117 – 330 Arata Lane Subdivision

The 330 Arata Lane Subdivision facilities to be operated and maintained using revenue produced from this assessment district zone include two storm water quality features (tree pod units) on Graciela Drive, within the development. These features help to manage and purify storm run-off from this zone which currently consists of a single parcel and is expected to subdivide into six individual parcels with a remainder parcel. The remainder parcel will not have drainage that flows to the tree pod units and will therefore not be included in this district. The six parcels that will abut Graciela Drive will receive the following direct special benefit from the maintenance of the storm water quality facilities:

- Enhanced desirability of properties through association with the improvements,
- Reduced flooding risk of properties through maintenance of the improvements,
- Improved air quality from additional vegetation (in tree pod units), and
- Improved water quality from purification of storm run-off.

Although the public at large benefits from improved air and water quality, this general benefit is considered negligible compared to the improved aesthetics, reduced flood risk, and air and water quality improvement resulting from the tree-pod treatment that will benefit the properties within Zone 117.

Due to there being only one parcel at this time, the parcel is assessed as a single parcel unit this year.
In the future, as the run-off will be generated from each of the six parcels and each parcel is generally equal in size, each parcel will be considered to share an equal portion of the special benefit of the maintenance of these facilities. Therefore, each parcel within this subdivision will be considered a one parcel unit, for a total of six parcel units for this zone. No parcel is anticipated to subdivide further nor are parcels anticipated to merge. If this does occur in the future however, the total parcel units and benefit costs attributable to the merged or subdivided parcels will be re-spread to those parcels only. For example, should a merge of two parcels occur, the new parcel would be assigned two parcel units. Should a split of one parcel occur, an equitable split of the one parcel unit would occur.

PART E

FY 2021-22 PROPERTY OWNERS LIST

The names and addresses of each of the property owners as shown on the County of Sonoma Assessor's Tax Assessment Roll have been keyed to the benefit assessment number (the assessor parcel number) as shown in Part C of this Engineer’s Report.

PART F

FY 2021-22 ASSESSMENT DIAGRAM

Attached, are the Assessment Diagrams (maps) for each Zone within the Assessment District. The first map is an overview showing the locations of all Zones of the Assessment District. Please note that the lines and dimensions of each parcel within their developments, as well as the distinctive assessment number, are shown on the Assessor's Maps for the Town of Windsor available at the County of Sonoma Assessor's Office. The attached pages provide the reference to the appropriate Assessor Books or Assessor Parcel Numbers at the County of Sonoma Assessor's Office for the subdivisions in each of the Zones.

Zone 101 – Shiloh Oaks

All the land lying within Parcel Map 05-24 (Shiloh Oaks), filed in the Recorder's Office of the County of Sonoma in Book 716, Pages 1-5 and amended by Shiloh Oaks Amended map recorded in Book 739 of Maps, Pages 40-44.

Zone 103 – Windsor Redwoods

All land lying within Windsor Redwoods development, Town of Windsor File No. UP 06-16, and known known in the Assessor's Office of the County of Sonoma as Assessor Parcel Number 163-171-041.

Zone 104 – Manzanita Subdivision

All the land lying within the Manzanita Subdivision, filed in the Recorder's Office of the County of Sonoma in Book 744, Pages 40-43.

Zone 108 – Bell Village Commercial

The land lying within the commercial portion of the Bell Village Commercial Center Phase 1 development also known as the Town of Windsor file number MJS 09-17 and filed in the Recorder's Office of the County of Sonoma in Book 778, Pages 01-10.

Zone 109 – Vintage Oaks on the Town Green (previously Bell Village Residential)

The land lying within the residential portion of the Bell Village Commercial Center Phase 1 development also known as the Town of Windsor file number MJS 09-17, and filed in the Recorder's office of the County of Sonoma in Book 778 of Maps, Pages 01-10

Zone 110 – Holiday Inn

All the land lying within the Holiday Inn development, Town of Windsor File No. DRC/VAR-07-42 and known in the Assessor's Office of the County of Sonoma, as Assessor Parcel Number 164-030-061.

Zone 113 – Victoria Oaks

All the land lying within the Town of Windsor File Number GPS/ZC/MJS/UP 05-28 and known in the Assessor's Office of the County of Sonoma, as APNs 163-130-030, 163-130-031 and 163-130-032.

Zone 115 – Los Amigos Subdivision

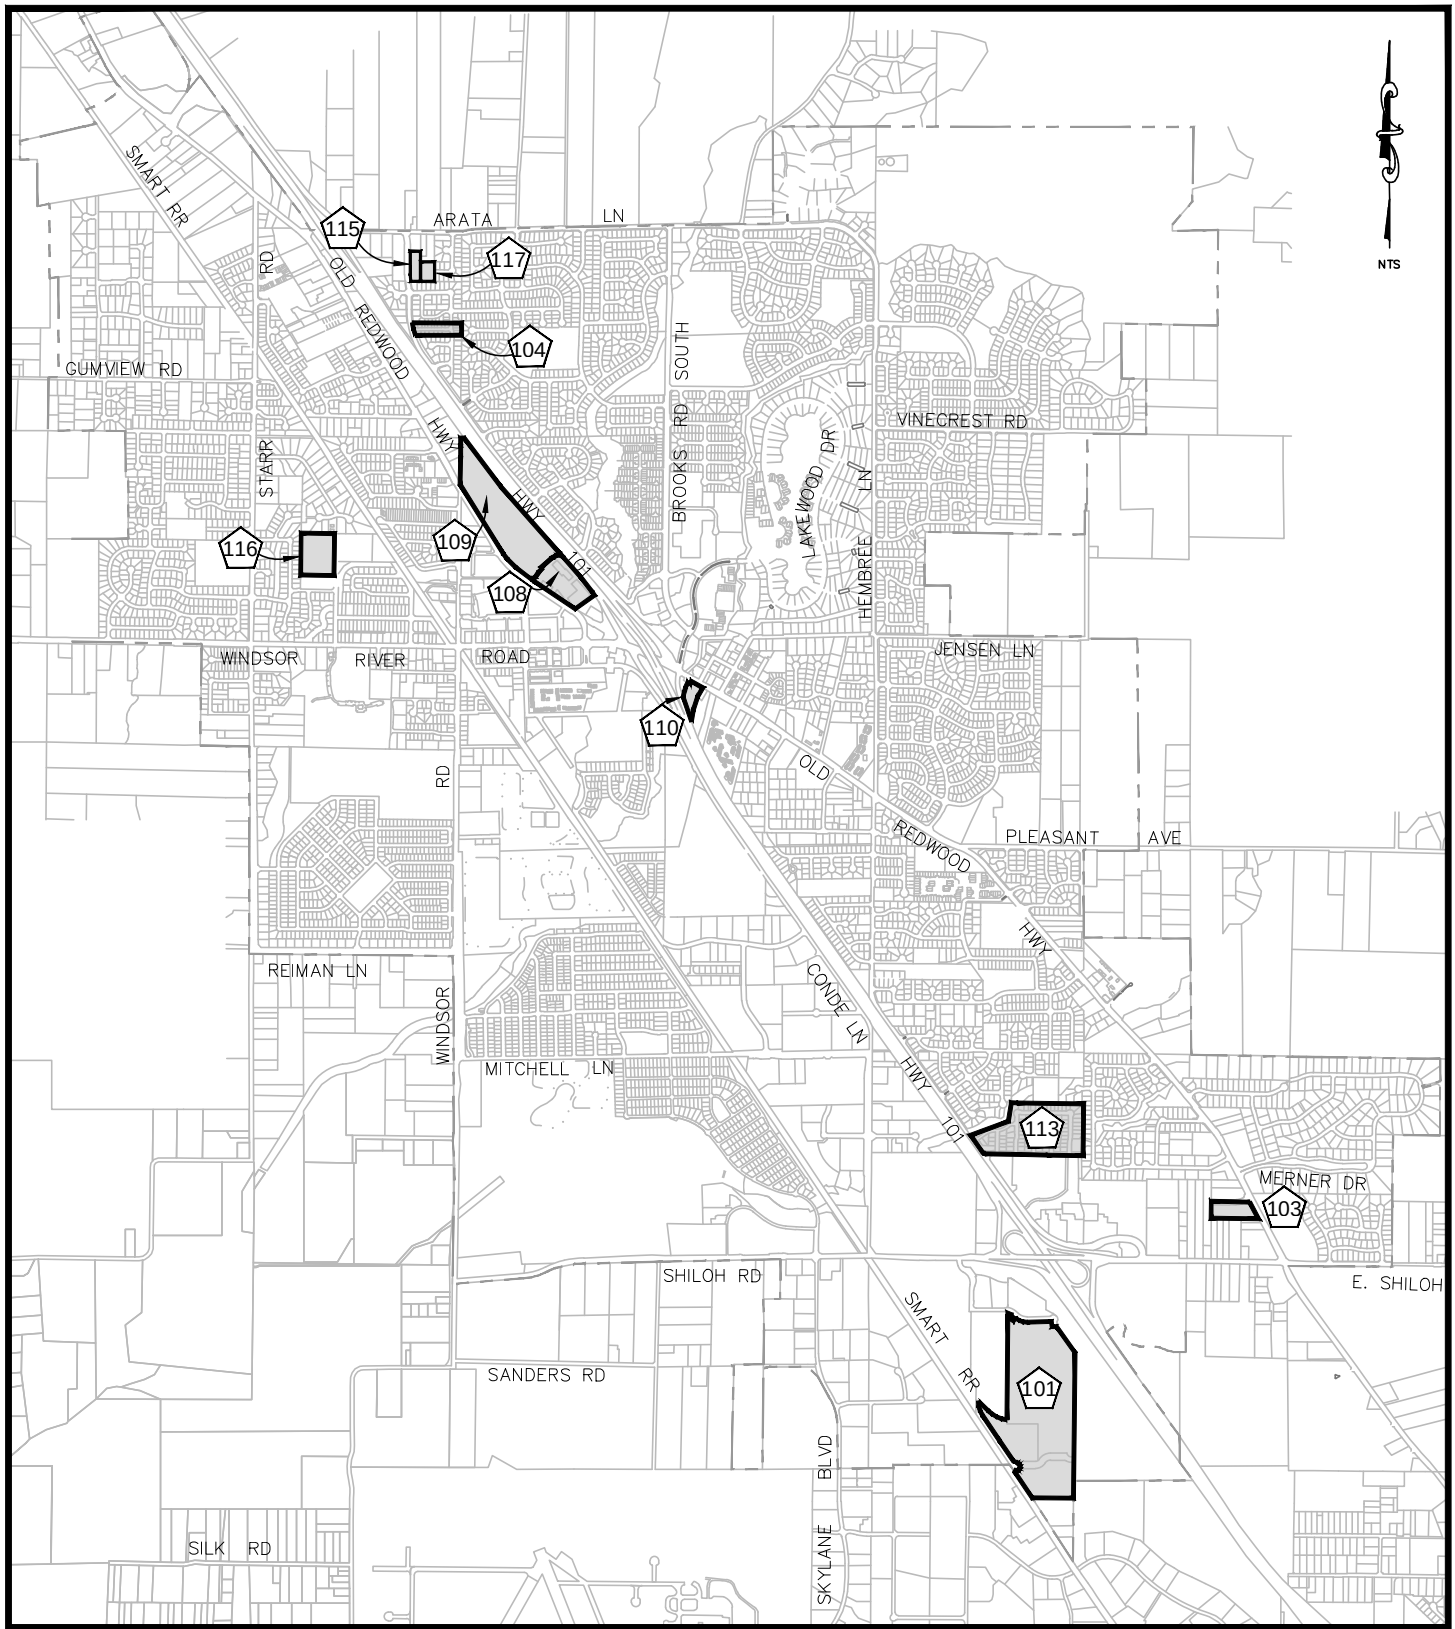

All the land lying within the Town of Windsor File Number MJS 14-20 and known in the Assessor's Office of the County of Sonoma, as APN 161-050-068

Zone 116 – Windsor Veterans Village

All the land lying within the Town of Windsor File Number UP/DRR 17-18 and known in the Assessor's Office of the County of Sonoma, as APN 066-060-068.

Zone 117 – 330 Arata Lane Subdivision

All the land lying within the Town of Windsor File Number MJS/UP 15-30 and known in the Assessor's Office of the County of Sonoma, as APN 161-500-030.

NOTE:
FOR THE DISTINCTIVE ASSESSMENT NUMBER AND DETAILED DESCRIPTION OF THE LINES AND DIMENSIONS OF EACH PARCEL REFER TO THE ASSESSORS MAPS FOR THE TOWN OF WINDSOR AVAILABLE AT THE COUNTY OF SONOMA ASSESSORS OFFICE.
